

# Pronto Cloud File Share

Secure document management  
for Pronto Xi

**PRONTO CLOUD**

Pronto Cloud File Share is a secure, cloud-based content collaboration platform that enables teams to work together on documents, images, videos and more – from wherever they are.

Poor document management leads to unnecessary errors and rework – causing frustration and reducing team performance. Most business documents follow a standard journey – they are created, reviewed, annotated, shared over emails, stored on devices or online and printed. All this until a new version is created and then it starts all over again. As teams collaborate within or across departments – and with external stakeholders such as customers, multiple files are simultaneously created with varying levels of urgency and confidentiality. Managing this process is chaotic and risk-prone. Learn how Pronto Cloud File Share helps teams collaborate without barriers.

### Centralise content

Files that are dropped into the folder are instantly uploaded to Pronto Cloud File Share. As staff continue to work on these files, synchronisation happens in the background, eliminating the need for multiple local copies. This puts a stop to the time-consuming hunt for the right file – and the complex process of maintaining versions. Pronto Cloud File Share simplifies the collaboration process, making everyone more productive.

### Work smarter

The ability to post comments on files and tag them, makes search and retrieval easier – removing two key obstacles to collaboration. Files can be shared internally with team members or externally, secured by a password. With built-in access controls, file group management and configurable notifications, Pronto Cloud File Share is an enterprise-level solution that is customised to suit individual organisations – resulting in accelerated efficiency.

### Enable frictionless teams

Along with Pronto Xi ERP, Pronto Cloud File Share keeps everyone on the same page and enables business processes to flow smoothly. With a flexible and highly configurable content collaboration platform, teams can focus on growing the business while critical information stays updated and secure in the cloud.

### Access anytime, anywhere

Pronto Cloud File Share works seamlessly with Quicklinks and Pronto Xi Trueform Neo, integrating natively into automated workflows. All linked documents, including purchase and sales orders, invoices and quotations are automatically stored and securely accessed from any device. To maintain confidentiality or manage role-specific access, the authorisation to view, download or amend files can be configured according to rules set up in Pronto Xi.

Pronto Cloud File Share is also deployed in the same secure virtual space as the Pronto Xi instance of a business. This co-location provides the flexibility to manage upgrades and achieve scalable performance.
